**Beta Prevent: Health Check-ups**

The earlier an illness is diagnosed, the better and faster it can be healed as a rule. With a good prevention programme the basis for good health and quality of life can be enjoyed into old age. "With our health care offers, we offer our patients the opportunity of early detection and prevention of any health issues. All this can be done and carried out on one day at a mutually agreed time in comfortable surroundings and supported by the most modern examination procedures and diagnostic equipment", explains Dr. Andre Demant, head of preventative check-ups at the Beta Klinik.

The Beta Checks are carried out under the personal guidance of one of the doctors who also leads the in-depth final discussion. The patient receives an examination folder containing the doctor's report and documenting all results, findings and recommendations for treatments / therapies.

The private Beta Klinik in Bonn together with Beta Prevent offers three different check-up programmes which can be individually tailored:

- Beta Basis Check
- Beta Executive Check
- Beta Premium Check

**Beta Basis Check**

- In-depth consultation with doctor about your medical history
- Neurological, internal and orthopaedic clinical examination
- Laboratory examination with relevant parameters for check-up
- MRI of relevant body parts in agreement with doctor
- Computer tomography (CT) of lungs and heart for risk assessment in the case of given

**PRESSEINFORMATION**

indicators
