

Your health –  
our expertise

THE INTERNATIONAL CLINIC BONN

# Welcome to the Beta Klinik

The Beta Klinik, Bonn, is an international private clinic. Fifty doctors from more than 20 different medical specialities are engaged, and support is provided by approximately 180 staff members. High-level specialisation in conjunction with state-of-the art, university-level technology has been the basis of our success ever since the Beta Klinik was founded. Professionals from all medical disciplines work together on an interdisciplinary basis. As a result, our patients who travel great distances have access to all examinations, follow-up examinations and specialist consultations / discussions during their stay at the Beta Klinik.

The philosophy of our "one roof" concept is clear: We see people and their various diseases as a whole. We take as much time for you, our patients, as needed. Detailed discussions with our patients are as important to us as the high-end diagnostic devices used in our laboratory. As a result, our highly-specialized, yet diversified team of doctors can ensure a holistic approach.

## Exceptional competence

The Beta Klinik attaches great importance to complementing high professional competence with internationally utilized equipment and university-level standards. Our clinic has several operating theatres that are fully equipped with the latest technology and an abundance of state-of-the-art diagnostic devices.

### Our equipment includes:

- two high-field magnetic resonance imaging systems of the latest technology (1.5 and 3 Tesla)
- a multi-slice computer tomography (CT) scanner
- a left heart catheter
- an X-ray system and various endoscopy devices
- several ultrasound devices, including a mamma ultrasound unit and a urology ultrasound unit with MRI diagnostics
- a shockwave therapy device
- a Zeiss high-performance surgical microscope
- a digital mammography unit with tomosynthesis
- a neuronavigation system
- neurofeedback (NFB)
- an in-house laboratory for immediate blood analysis
- a dedicated dental laboratory

**High-tech operating theatres:** Surgery is performed in fully equipped clean room operating theatres (Class 1a) as well as one Class 1b theatre, one interventional angiography room and one outpatient operating room. The recovery room and intensive care unit are immediately adjacent.

# About the clinic

## Gentle methods

People who are uncomfortable in enclosed spaces will benefit from our open high-field magnetic resonance imaging system, which has a 75-cm opening. Since the unit is only half as long as a customary device, a "tube effect" does not occur. For the majority of examinations, the patient's head is out in the open.

Our multi-slice computer tomography (CT) scanner has dose-reducing programmes that minimize radiation doses. In the hands of our experts, these devices deliver reliable and informative diagnoses – indispensable for successful treatment.

## Medical scope

Examination, treatment, operations, and rehabilitation are all based on a holistic approach. All medical experts at the Beta Klinik work towards one common goal – your health.

## An atmosphere designed for comfort

In addition to high quality medical treatment and empathetic personal care, surroundings play an important role in a patient's recovery. Therefore, the Beta Klinik places great importance on maintaining a pleasant atmosphere – combining medical functionality with aesthetics.

# Your stay with us

Patients travelling from abroad often have different medical insurance schemes. Before your stay with us, consultation regarding your therapy plan and the prospective costs of your scheduled examinations and treatments is offered. Our doctors, therapists, and many of our employees speak fluent English. Upon request, interpreters for other languages can be engaged.

## Our rooms and suites

For inpatient treatment, the clinic is equipped with 50 comfortable, modern single rooms with en-suite bathrooms. Upon request, double rooms can be made available.

In addition, two luxurious suites, 55 and 58 square metres respectively, are at your disposal. Both units include a bedroom, a spacious bathroom and a separate living area.

If medical conditions permit, patients may choose to stay at the neighbouring Kameha Grand Hotel.
