our expertise

Orthopaedics and sports medicine

Diagnostics, therapy and aftercare from a single source

Nearly every person suffers musculoskeletal system pain during his/her life. Many complaints are temporary, but some become chronic. Correct diagnosis at the onset and personalised therapy arising therefrom are crucial to treatment success.

In collaboration with the group practice and Beta Klinik interdisciplinary teams, orthopaedists Peter Braun and Dr. med. Markus Klingenberg handle the complete range of musculoskeletal system complaints, at the highest level. Patients are offered a variety of conservative and surgical therapies. They receive intensive consultation, radiological diagnostics and treatment under one roof of expert hands.

Individual support is complemented by the Beta Klinik's state-of-the-art medical equipment as well as the field of sport and rehabilitation.

Our operative areas of focus (excerpt)

Joint replacement (endoprosthesis)

Hip – knee

Peter Braun, a specialist in the areas of hip and knee joint replacement, works with patients in order to find suitable treatment strategies as well as appropriate and customisable prosthesis models.

Minimally invasive joint surgery (arthroscopy)

Shoulder – knee – ankle

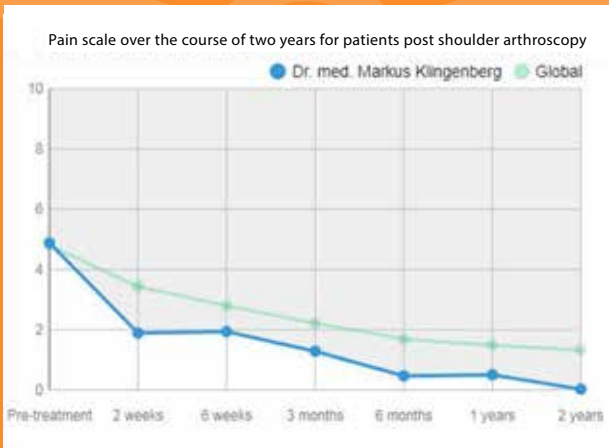

Orthopaedists perform arthroscopic surgery on all joints, specifically the shoulder, knee and ankle, and treat bone, ligament and soft tissue injuries. Special treatment focus areas include cartilage therapy as well as regenerative biological therapy.

Foot and ankle surgery

Dr. med. Markus Klingenberg, a certified foot surgeon, specializes in all forefoot, hindfoot and ankle surgeries.

Sports traumatology

Acute sports injuries are professionally treated in a conservative or surgical manner. On weekends and holidays, we offer emergency orthopaedic and sports medicine consultations, including MRI scans, from 10.00 a.m. to 1.00 p.m. .

We monitor your healing progress and take care of you from the surgery itself to recovery completion.

Beta Sport & Reha – Prevention and rehabilitation

The physicians are also in charge of the Beta Sport & Reha division. Patients and athletes benefit from this intensive interdisciplinary treatment, and they are looked after in close coordination.

Holistic diagnostic and therapeutic approaches, which are based on differentiated movement analyses, are the main focus here. An effective Return-to-Sport programme assists athletes with long-term recovery and reduces the risks of further injuries.
